Joyous turnout celebrates Franklin VNA & Hospice's Executive Director

This past week staff, community members, friends and family celebrated Barbara Normandin as they gathered together to honor her years of service to Franklin VNA & Hospice and wish her well as she moves into retirement and a new stage of her life.

TAKE YOUR MEDICINE

BY SARAH CHAPIN

A new study has found treatment with the diabetes drug amylin (or pramlintide) safely improves learning and memory function in Alzheimer's disease (AD) patients and reduces the AD pathology in their brains. The findings, which appear in the journal *Translational Research and Clinical Interventions*, also may lead to the development of a blood test for AD. Currently, lumbar punctures to detect biomarkers in cerebrospinal fluid and positron emission tomography imaging scans are used to diagnose AD. Unfortunately many patients are fearful of these procedures and the high cost is prohibitive.

Makena, a drug commonly prescribed to pregnant women with a history of delivering babies early provides no benefit according to a study published in the *American Journal of Obstetrics and Gynecology*. In fact, this drug may even increase the risk of developing gestational diabetes.

Regular use of ibuprofen (Advil) was associated with a 31% increased risk of cardiac arrest, according to research published in the *European Heart Journal — Cardiovascular Pharmacotherapy*. This provides additional evidence for the U.S. Food and Drug Administration strengthening in 2015 an existing label warning that non-aspirin nonsteroidal anti-inflammatory drugs (NSAIDs) increase the chance of a heart attack or stroke. NSAIDs are widely used to treat pain and fever from many different long- and short-term medical conditions such as arthritis, menstrual cramps, headaches, colds, and the flu. NSAIDs are available by prescription and OTC. Examples of NSAIDs include ibuprofen, naproxen, diclofenac, and celecoxib.
